

CMSC 754 Computational Geometry

David M. Mount

Spring 2007

Lecture 1: Introduction to Computational Geometry.....	2
Lecture 2: Geometric Basics and Fixed-Radius Near Neighbors.....	5
Lecture 3: Convex Hulls.	12
Lecture 4: More Convex Hull Algorithms.....	17
Lecture 5: Polytopes and Convex Hulls in Higher Dimensions.....	20
Lecture 6: Line Segment Intersection.....	26
Lecture 7: Polygon Triangulation.....	31
Lecture 8: Halfplane Intersection.....	35
Lecture 9: Linear Programming.....	40
Lecture 10: Planar Point Location and Trapezoidal Maps.....	45
Lecture 11: More on Planar Point Location.....	49
Lecture 12: Voronoi Diagrams and Fortune's Algorithm.....	52
Lecture 13: Delaunay Triangulations.....	59
Lecture 14: Delaunay Triangulations: Incremental Construction.....	62
Lecture 15: Line Arrangements and the Zone Theorem.....	67
Lecture 16: Applications of Arrangements.....	70
Lecture 17: Orthogonal Range Searching and kd-Trees.....	75
Lecture 18: Orthogonal Range Trees.....	79
Lecture 19: Geometric Approximations and WSPDs.....	82
Lecture 20: Applications of WSPDs.....	88
Lecture 21: Range Spaces, Nets, and Approximations.....	93
Lecture 22: Planar Graphs, Polygons and Art Galleries.....	99
Lecture 23: DCEL's and Subdivision Intersection.....	103
Lecture 24: Smallest Enclosing Disk.....	105
Lecture 25: Interval Trees.....	108
Lecture 26: Hereditary Segment Trees and Red-Blue Intersection.....	113
Lecture 27: Kirkpatrick's Planar Point Location.....	116
Lecture 28: Lower Bound for Convex Hulls.....	120
Lecture 29: Voronoi Diagrams.....	122
Lecture 30: Delaunay Triangulations and Convex Hulls.....	125
Lecture 31: Topological Plane Sweep.....	128
Lecture 32: Ham-Sandwich Cuts.....	131
Lecture 33: Shortest Paths and Visibility Graphs.....	132
Lecture 34: Motion Planning.....	134
