Winter Term 2016

Contents

1 Debugging

2 Logging

3 Testing

4 Tasks

- Together
- Your turn

Debugging

Debugging

- No application is perfect,
- When an issue occurs, it is necessary to be able to:
 - Identify it,
 - Reproduce it,
 - Determine its cause,
 - Fix it.

Debugging

Multiple ways of identifying an issue:

- ① Error in browser (Developer console/tools – *F12*),
- ② Log entry,
- ③ Exception stack trace,
 - It is necessary to be able to determine which part of a stack trace is relevant and which is just the framework infrastructure,
 - Enterprise applications → long stack traces.

Stack trace

```

2016-10-18 14:32:617 [RMI TCP Connection(2)-127.0.0.1] MARN D.S.W.C.S.AnnotationConfigWebApplicationContext : Exception encountered during context initialization - cancelling refresh attempt

Logging

Logging

- Logging provides important auditing information about the application,
- Good to log:
 - Exceptions (duh),
 - Application state information,
 - Input/output data information,
- Configurable levels,
 - Minimal logging for production,
 - Maximal for debugging/testing.

Java - logging frameworks

- **JUL (java.util.logging)**

- Part of JDK, no external libraries necessary,
- multitude of logging levels,

- **Apache Log4j**

- Leading logging frameworks for years,
- Easy configuration,

- **Simple Logging Facade for Java (SLF4J)**

- Logging facade, requires implementation,
- This separation is favourable – possible to use with JUL, Log4j, logback or others,
- Current logging leader,

- **logback**

- Successor of the original Log4j,
- Today's most common configuration – SLF4J + logback.

Logging levels

From SLF4J:

- ① Trace
- ② Debug
- ③ Info
- ④ Warn
- ⑤ Error
- ⑥ Fatal
- ⑦ All

Testing

Enterprise Application Testing

We are...

Assuming you already have experience with testing.

Enterprise application testing is:

- Harder,
- Much more about the right configuration,
- Otherwise similar to the usual:
 - JUnit,
 - Mockito,
 - Cucumber,
 - Selenium.
- Should be automated as much as possible,
 - Big applications, not enough testers, not enough time.

Code coverage

- How much of the code is covered by tests,
- Coverage of lines, branches, classes, methods etc.,
- **100% coverage does not mean code without bugs,**
- JaCoCo, Cobertura,
- Testing and coverage can be configured as part of Maven build.

Tasks

Time to do some work

- We have a simple application,
- But its output is kind of weird,
- We need to figure out the issue,
- Fix it,
- And verify the fix worked.

Time to really do some work

- We still have a simple application,
- And its output is still kind of weird,
- **You** need to figure out the issue,
- Fix it,
- And verify the fix worked.
