Outline

1 Unified Foundational Ontology

- Introduction
- UFO Modules
- Categorization of Object Types

Idea

- We will use Unified Foundation Ontology (UFO) as main upper level ontology to guide development of domain level ontology and consequently application ontologies.
- Theoretical background behind the UFO will help us to validate our design decisions during the ontology development.

Unified Foundational Ontology

- Categorization of Object Types

What is Unified Foundational Ontology (UFO) ?

- a foundational ontology developed by Giancarlo Guizzardi et al.
- a descriptive ontology representing universals and particulars, endurants and perdurants
- based on theories from Formal Ontology, Philosophical Logics, Philosophy of Language, Linguistics and Cognitive Psychology
- incorporates ideas from GFO, DOLCE and the Ontology of Universals underlying OntoClean

UFO Modules

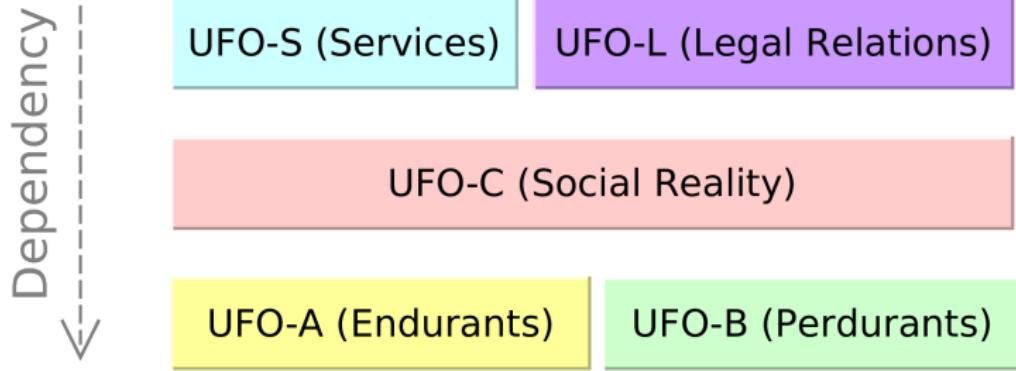

1

Unified Foundational Ontology

- Introduction
- **UFO Modules**
- Categorization of Object Types

UFO Core Modules Structure

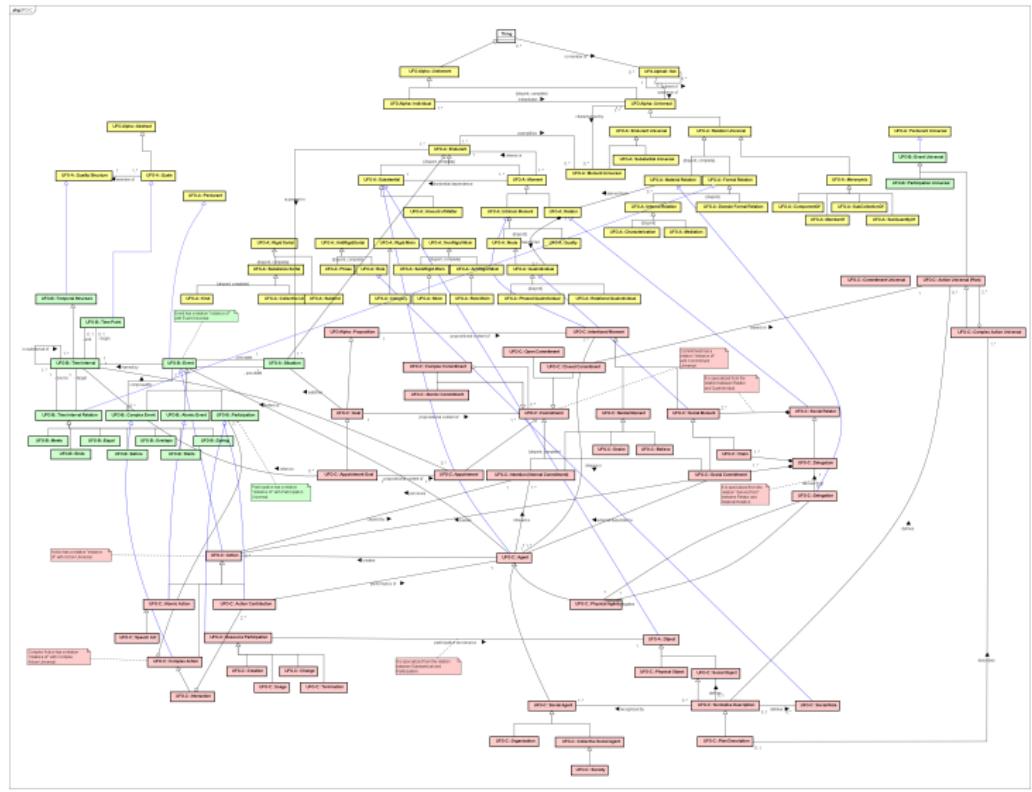

UFO Core Modules Overview¹

- **UFO-A** – an ontology of *endurants* dealing with aspects of structural conceptual modeling such types and taxonomic structures, part-whole relations, particularized intrinsic properties, attributes and attribute value spaces, particularized relational properties and relations, roles[3].
- **UFO-B** – an ontology of *perdurants* (*events, processes*) including perdurant mereology, temporal ordering of perdurants, object participation in perdurants, causation, change and the connection between perdurants and endurants via dispositions [6].
- **UFO-C** – an ontology of *intentional and social entities* addressing notions such as beliefs, desires, intentions, goals, actions, commitments and claims, social roles and social particularized relational complexes (social relators) [4].
- **UFO-S** – an ontology for *commitment-based services* [7].
- **UFO-L** – an ontology representing *legal domain* [2].

¹For detailed overview see [4, 5]

Relations within Core Modules of UFO

Relations among concepts of *UFO-A*, *UFO-B*, and *UFO-C* modules taken from <http://ontouml.org>.

Categorization of Object Types

1

Unified Foundational Ontology

- Introduction
- UFO Modules
- Categorization of Object Types

Ontological Meta-properties of Object Types

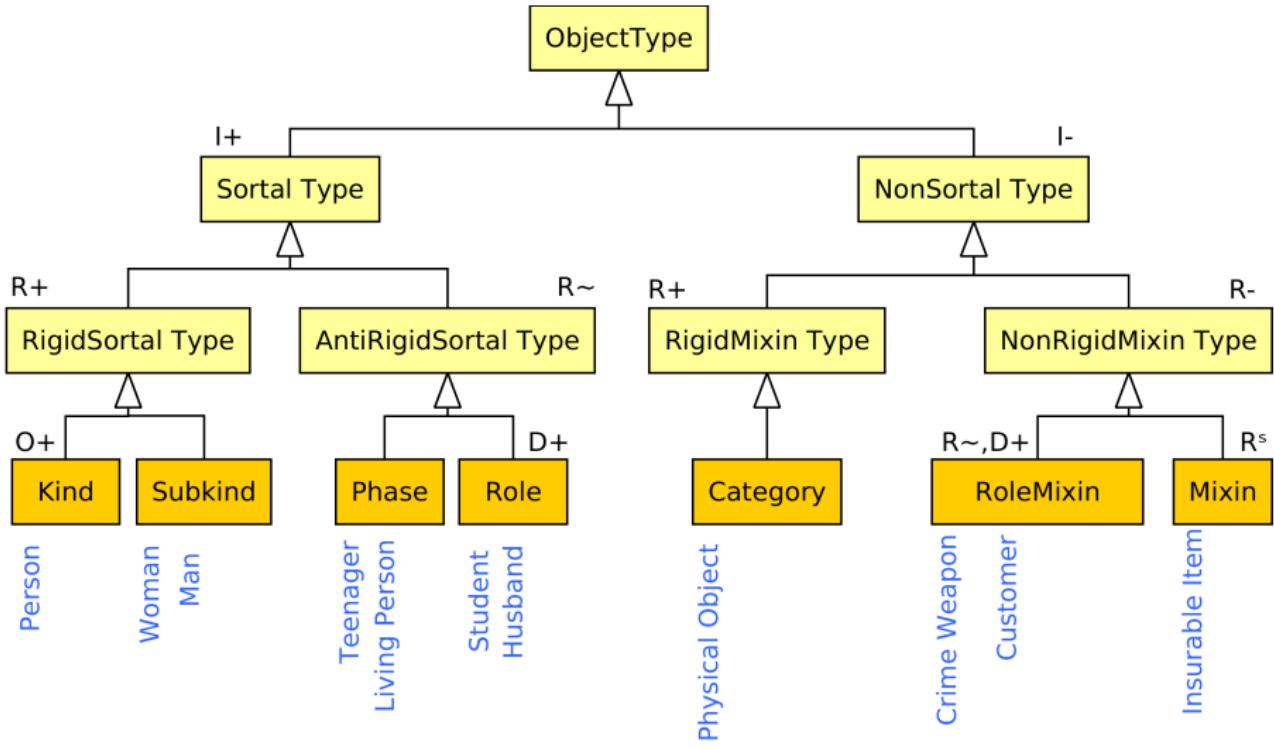

Let \mathbf{T} be an object type².

- Identity
 - $I^+(\mathbf{T})$ – carries identity
 - $O^+(\mathbf{T})$ – owns (supply) identity
- Rigidity
 - $R^+(\mathbf{T}) = \square(\forall x T(x) \rightarrow \square(T(x)))$ (Rigid)
 - $R^-(\mathbf{T}) = \neg R^+(\mathbf{T}) = \diamond(\exists x T(x) \wedge \diamond \neg T(x))$ (Non-Rigid)
 - $R^\sim(\mathbf{T}) = \square(\forall x T(x) \rightarrow \diamond(\neg T(x)))$ (Anti-Rigid)
 - $R^s(\mathbf{T}) = R^-(\mathbf{T}) \wedge \neg R^\sim(\mathbf{T})$ (Semi-Rigid)
- Relational Dependence
 - $D^+(\mathbf{T}, \mathbf{T}', \mathbf{R}) =_{def} \square(\forall x T(x) \rightarrow \exists y T'(y) \wedge R(x, y))$

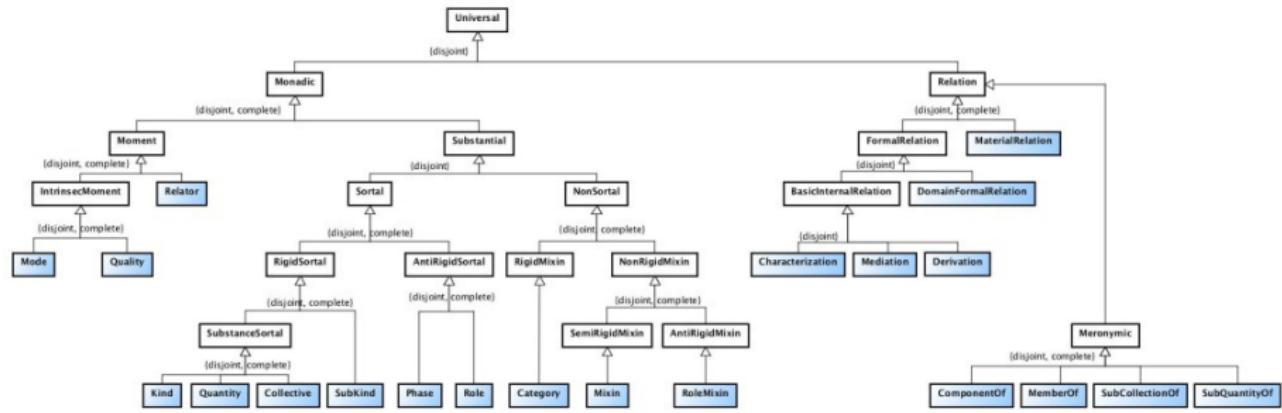

²Might be also referred as “Substantial”.

Categories of Object Types

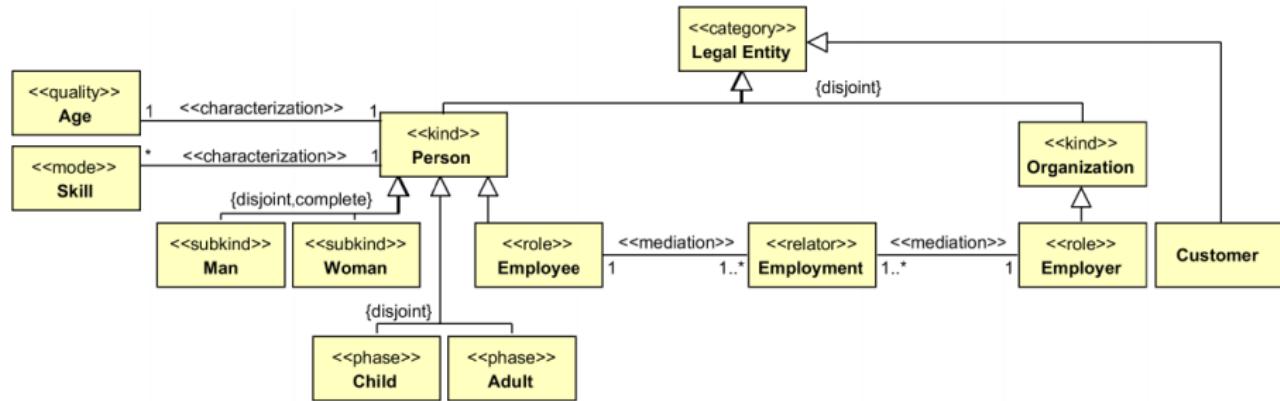

Categories of All Universals

Categorization of all universals taken from <http://ontouml.org>.

An Example

An example of UFO based model in OntoUML taken from [1].
