# Internet map in 1995 [Bri95]

## Synopsis

- Introduction to complex network structures.
- Network characteristics identification.
- Recognition of both structural static and dynamic patterns
- Anomaly detection.
- Specification methods of static and dynamic behavior.
- Model verification.
- Diagnostic process automation.
- Examples dealing with digital network application issues.

## Prerequisites

- Knowledge of linear algebra, graph theory, algorithms.
- Knowledge of network application and protocol fundamentals.

# Outline of Lectures

- ① Introduction to diagnostics, testing, and verification of network applications.
- ② Fundamental characteristics of networks, models of random graphs.
- ③ Power distribution and preferential linking.
- ④ Network structure identification.
- ⑤ Community detection.
- ⑥ Ties prediction and network inference.
- ⑦ Network dynamics and dynamic network processes.
- ⑧ Specification system Alloy and its usage for network applications.
- ⑨ Dynamic behavior specification using timed automata (UPPAAL).
- ⑩ Specification and verification of protocols using system UPPAAL.
- ⑪ Checking sequence of finite state machines.
- ⑫ Finite state machine behavior identification.
- ⑬ Tools for network testing and diagnostics, automation of processes.
- ⑭ Diagnostics of network and cloud applications.

# Outline of Seminars

- ① Student teams creation, development framework setting, basic libraries tutorial, an APSP path searching assignment.
- ② Variety type graph generation.
- ③ Rich club network nodes identification.
- ④ Computer communication network reconstruction.
- ⑤ Network partitioning and community detection.
- ⑥ Communication patterns detection
- ⑦ Sensor network dynamic assessment.
- ⑧ Protocol specification and verification using Alloy.
- ⑨ Dynamic system specification using UPPAAL.
- ⑩ Protocol verification using UPPAAL.
- ⑪ State determination using special sequence of finite machines.
- ⑫ Finite machine reconstruction using active learning.
- ⑬ Test case design for multilayer network.
- ⑭ Seminar evaluation.

# Course Rules

- <https://moodle.fel.cvut.cz/course/view.php?id=2318>  
... Moodle, a redirection to CW
- <https://cw.fel.cvut.cz/wiki/courses/b2m32dsa/start>  
... CourseWare (CW), BRUTE/Upload
- Seminars (max. 40 points)
- Examination (max. 60 points)
  - a written part, 24 points, 2 problems, 1 hour, accessible resources
  - a written part, 24 points, 4 questions, 1 hour, resources not accessible
  - an oral defense, 12 points
