A decorative background pattern of a network graph. It consists of numerous nodes, represented by small circles, connected by thin lines. Some nodes are highlighted with a blue outline, and some are solid blue dots. The pattern is more dense on the left and right sides of the slide, fading towards the center.

# Combinatorial Algorithms

RM35K0A

# Grading system

To get an [assessment](#), the following requirements have to be met:

- © obtain at least [30 from 50 points](#)
- © successfully [solve all homework](#) assignments

How to earn points:

- © 20 points (10p for each) for theoretical tests I, II (written at lectures)
- © 15 points for a semester project
- © 15 points for homework assignments No. 1-3.  
(5 points for each assignment if successfully submitted before the deadline)

For more information, please check the [course website](#):

<https://cw.fel.cvut.cz/wiki/courses/rm35koa/start>

# Homeworks

- © homeworks can be coded in **Python**, C++ or Java
- © each homework (the source code) **must be handed** into **BRUTE** (<https://cw.felk.cvut.cz/brute>) with a hard deadline specified in BRUTE
- © homeworks are **graded automatically** by the BRUTE
- © there is **1 penalty point for each commenced week** until the homework is uploaded successfully (you can't get less than 0 points for the homework)
- © Check [https://cw.fel.cvut.cz/wiki/courses/rm35koa/upload\\_system](https://cw.fel.cvut.cz/wiki/courses/rm35koa/upload_system) for technical requirements on the submitted source code

# Semester project

- © each student chooses from the following two options:
  - a. **Cocontest**  
Students participating in the contest implement a solver for one specific combinatorial optimization problem
  - b. **Research on a chosen topic**  
A student chooses a non-trivial problem from the combinatorial optimization area on which they will work during the semester. The lab teacher must approve the topic!
  - c. if a student wishes to choose **Research on a chosen topic**, they will email their lab teacher with the selected topic by **the strict deadline of 3. 3. 2023**

# Combinatorial Optimization Contest 2023

## © Optimization competition

- single real-life **optimization problem**
- you provide only **code with your solution**; no report needed
- solutions are **evaluated by BRUTE**
- grading comprises both the **ability to solve a set of basic instances** and the **rating among the other students** on harder instances
- **computation time** given for the solver **is bounded**

## © Past contests “**Hall of Fame**”

- **2022 winner: Jiří Němeček**
- 2021 winner: Karolína Machová
- 2020 winner: Václav Voráček
- 2019 winner: Pavel Gramovich
- 2018 winner: Lukáš Hejl
- 2017 winner: Ondřej Benedikt
- 2016 winner: Vladimír Kunc

# IKEM topics

- Machine learning: data from our internal Information System (CZ only)
  - Automatic completion of medical reports
  - Detection of anamnesis from medical reports (smoker, drinker, ...) or analysis of unstructured data in general, OCR
  - Statistical prediction of developing complications
- Virtual reality:
  - Extending application for organ visualization from CT images (e.g., decimation of complicated models)
  - Organ segmentation (detection of veins, cancer cells, ...)
- Statistical analysis of omics data (microbiome, metabolome, ...)
  - Many features/small number of observations
- Software projects: no-code designer of forms for research studies (CZ only)

# Research on Chosen Topic

- ◎ students can solve a **problem for some company, project, diploma thesis** etc.
- ◎ the assignment has two parts: **a written report and the implementation**
- ◎ **submission is divided into 3 parts constrained by deadlines**
  - **1 penalty point for the late delivery** (for each part)
- ◎ written document is between 4 and 8 pages
- ◎ the evaluation is performed by the student's lab teacher; **it considers fulfilment of formal requirements and the work quality**
