Windows Azure Storage

Storage in the Cloud

Scalable, durable, and available
Anywhere at anytime access
Only pay for what the service uses

Exposed via RESTful Web Services

Use from Windows Azure Compute
Use from anywhere on the internet

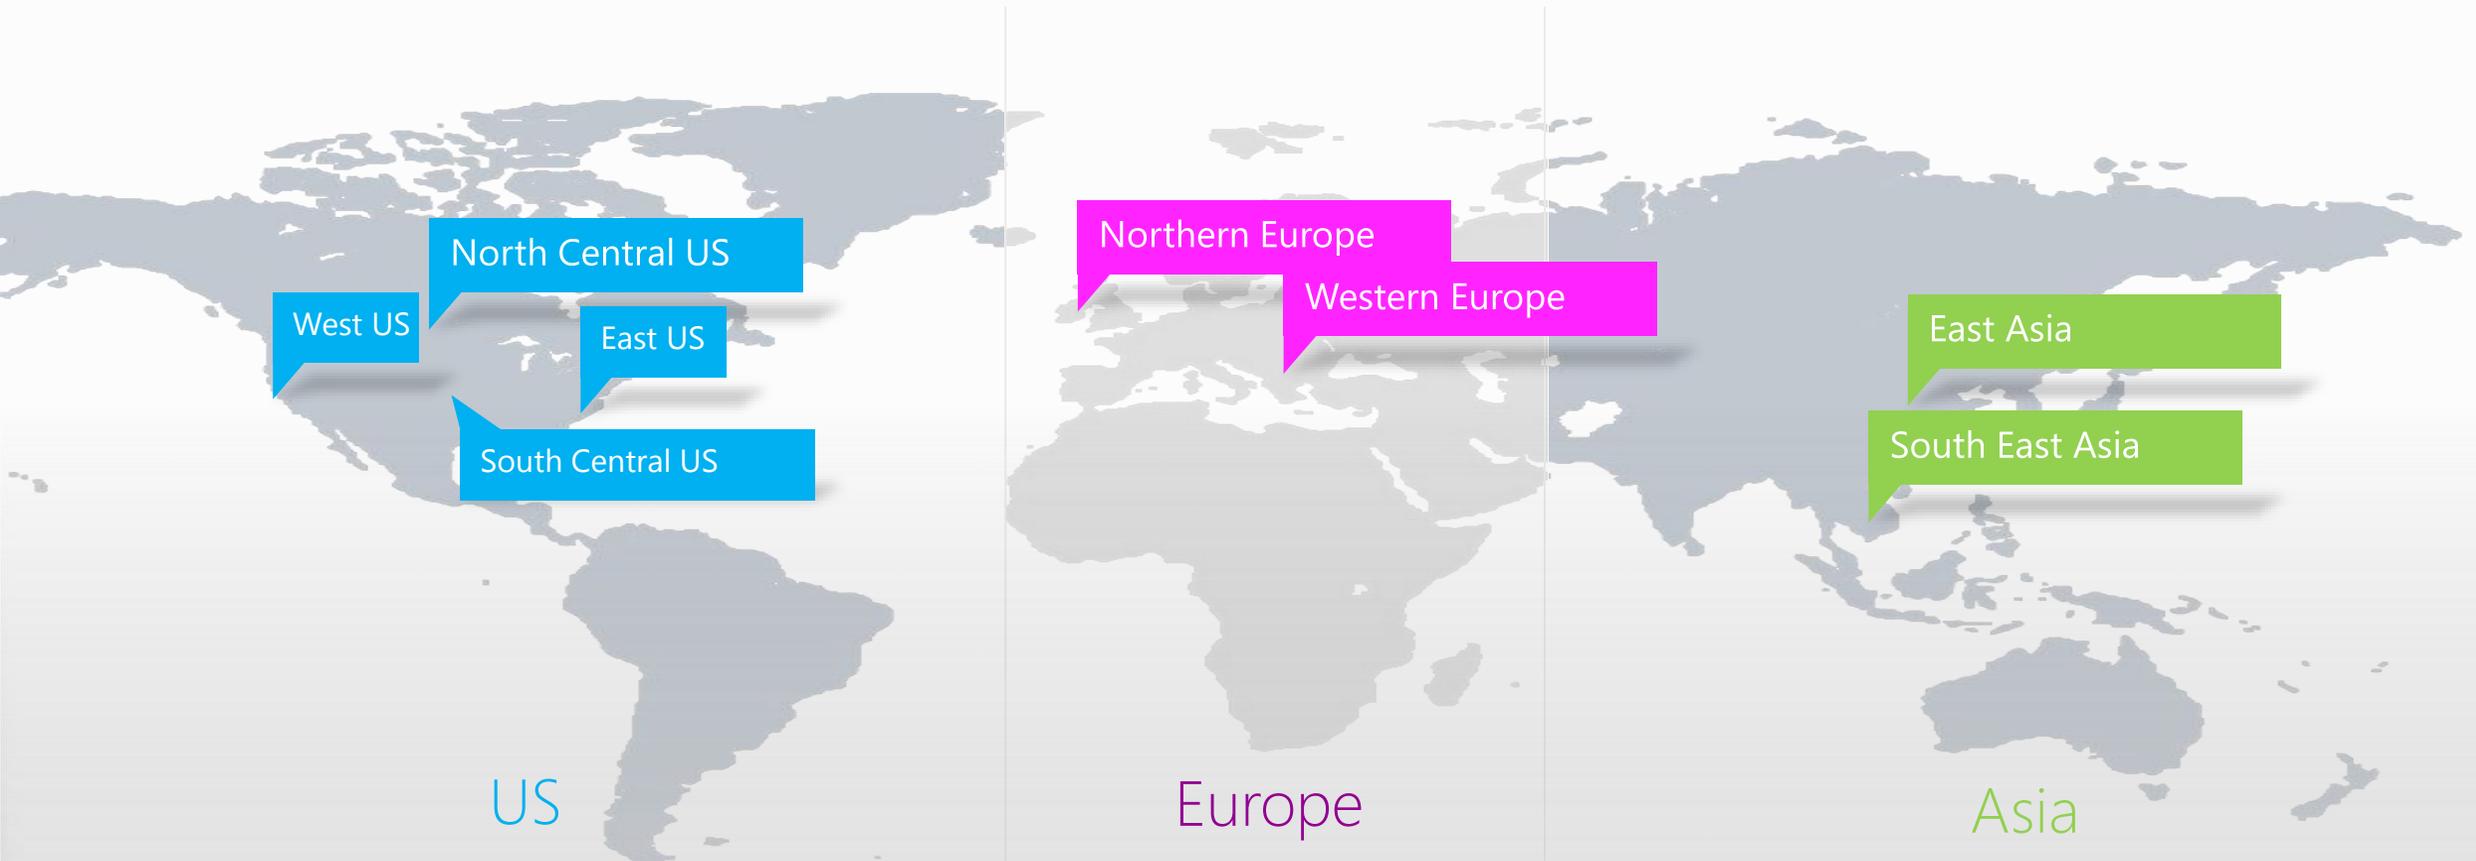

REST = Representational State Transfer – a client-server model for web applications

Windows Azure Storage Account

User specified globally unique account name

Can choose geo-location to host storage account:

Windows Azure Storage Abstractions

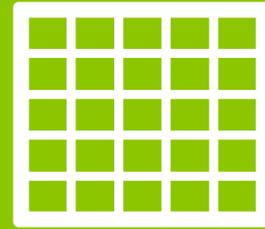

Blobs

Simple named files along with metadata for the file.

Drives

Durable NTFS volumes for Windows Azure applications to use. Based on Blobs.

Tables

Structured storage. A table is a set of entities; an entity is a set of properties.

Queues

Reliable storage and delivery of messages for an application.

Features

Geo-Replication

Storage Analytics

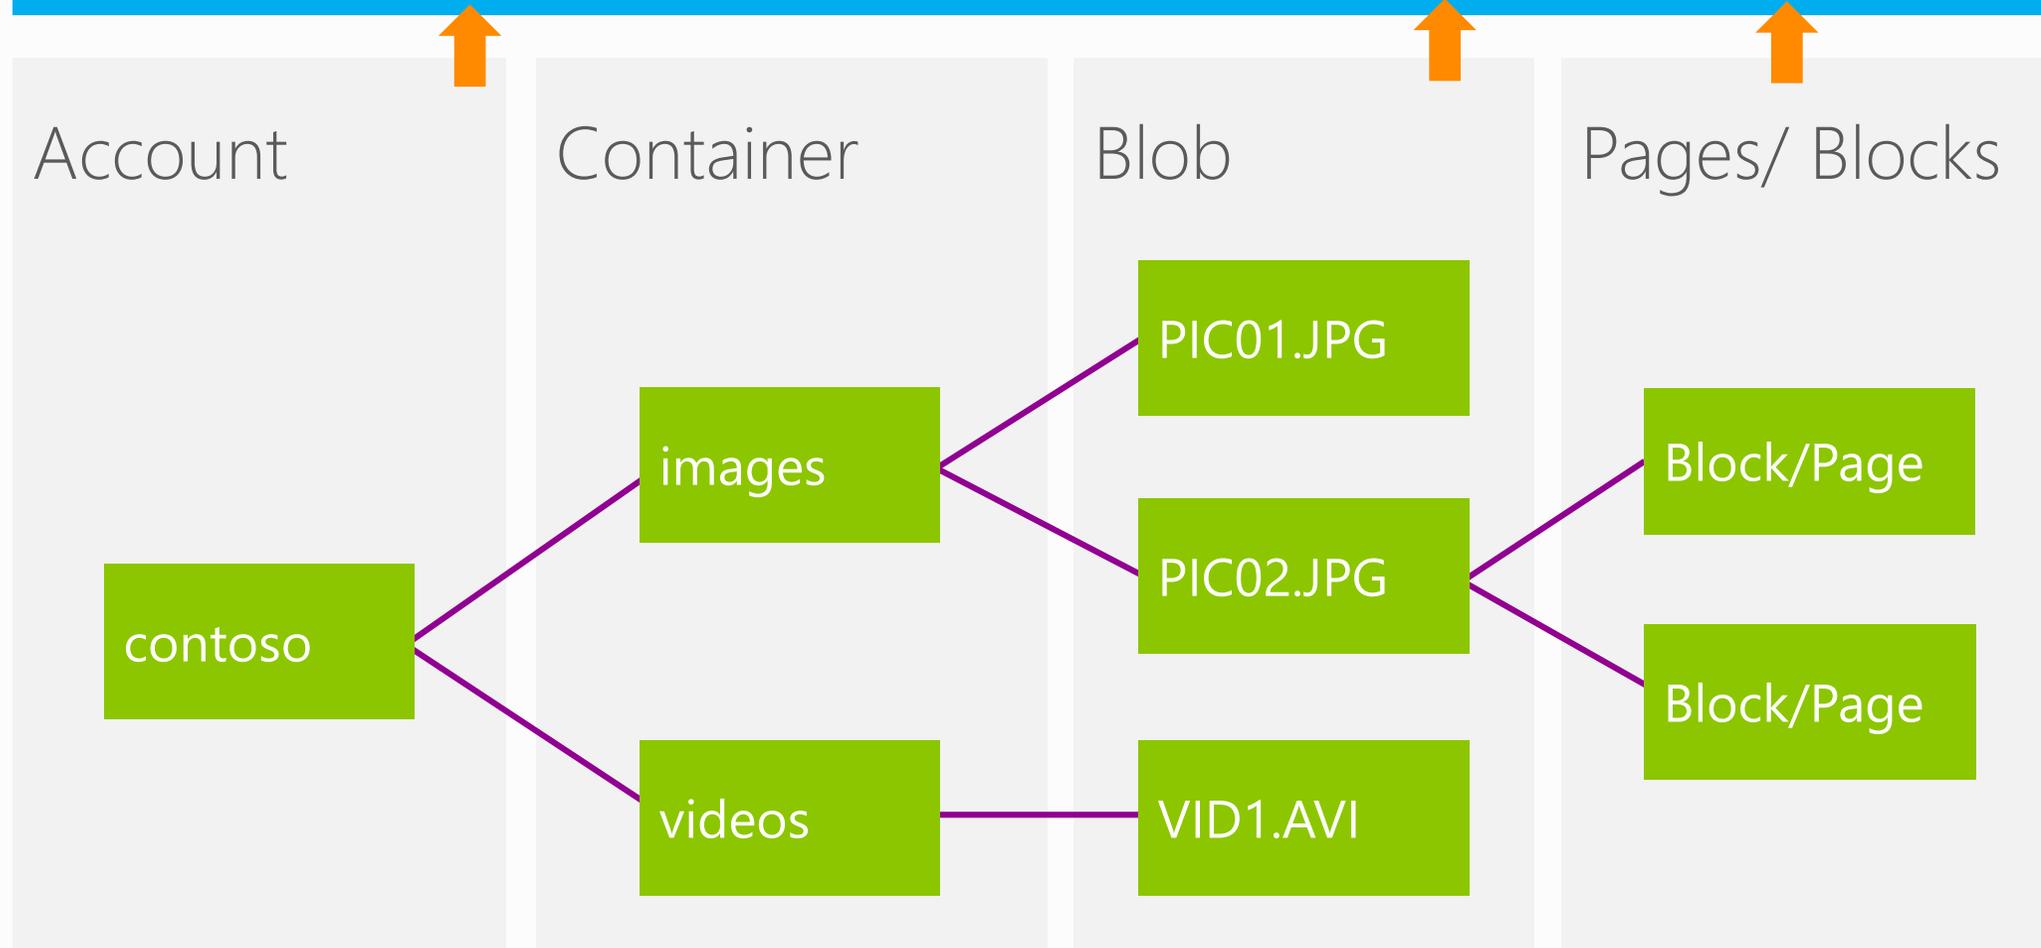

Background Async Copy

Blob Storage

Blob Storage Concepts

`http://<account>.blob.core.windows.net/<container>/<blobname>`

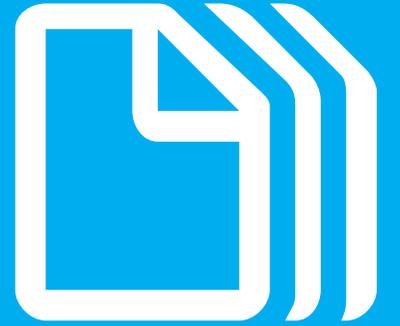

Blob Details

Associate Metadata with Blob

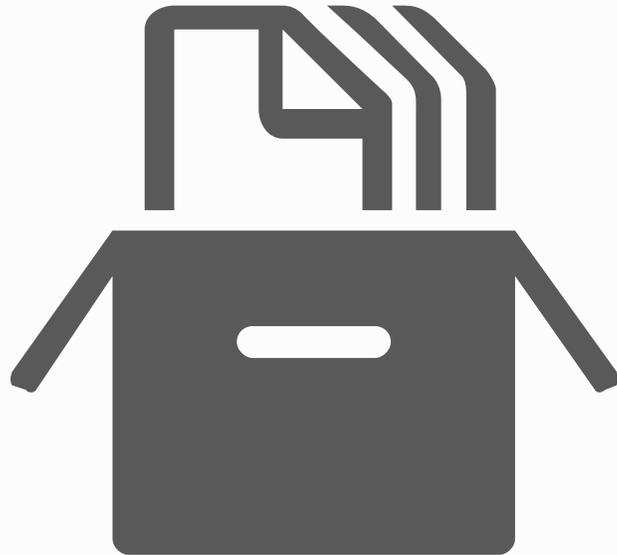

Standard HTTP
metadata/headers
(Cache-Control, Content-
Encoding, Content-Type, etc)

Metadata is <name, value>
pairs, up to 8KB per blob

Either as part of PutBlob or
independently

Blob Containers

Multiple Containers per Account

Special \$root container

Blob Container

A container holds a set of blobs

Set access policies at the container level

Associate Metadata with Container

List the blobs in a container

Including Blob Metadata and MD5

NO search/query. i.e. no WHERE MetadataValue = ?

Blobs Throughput

Effectively in Partition of 1

Target of 60MB/s per Blob

Two Types of Blobs Under the Hood

Block Blob

Targeted at streaming workloads

Each blob consists of a sequence of blocks

Each block is identified by a Block ID

Size limit 200GB per blob

Optimistic Concurrency via Etags

Page Blob (VHD)

Targeted at random read/write workloads

Each blob consists of an array of pages

Each page is identified by its offset from the start of the blob

Size limit 1TB per blob

Optimistic or Pessimistic (locking) concurrency via leases

Uploading a Block Blob

Uploading a large blob

Benefit

Efficient continuation and retry

Parallel and out of order upload of blocks

THE BLOB

```
blobName = "TheBlob.wmv";  
PutBlock(blobName, blockId1, block1Bits);  
PutBlock(blobName, blockId2, block2Bits);  
.....  
PutBlock(blobName, blockIdN, blockNBits);  
PutBlockList(blobName,  
              blockId1,...,blockIdN);
```

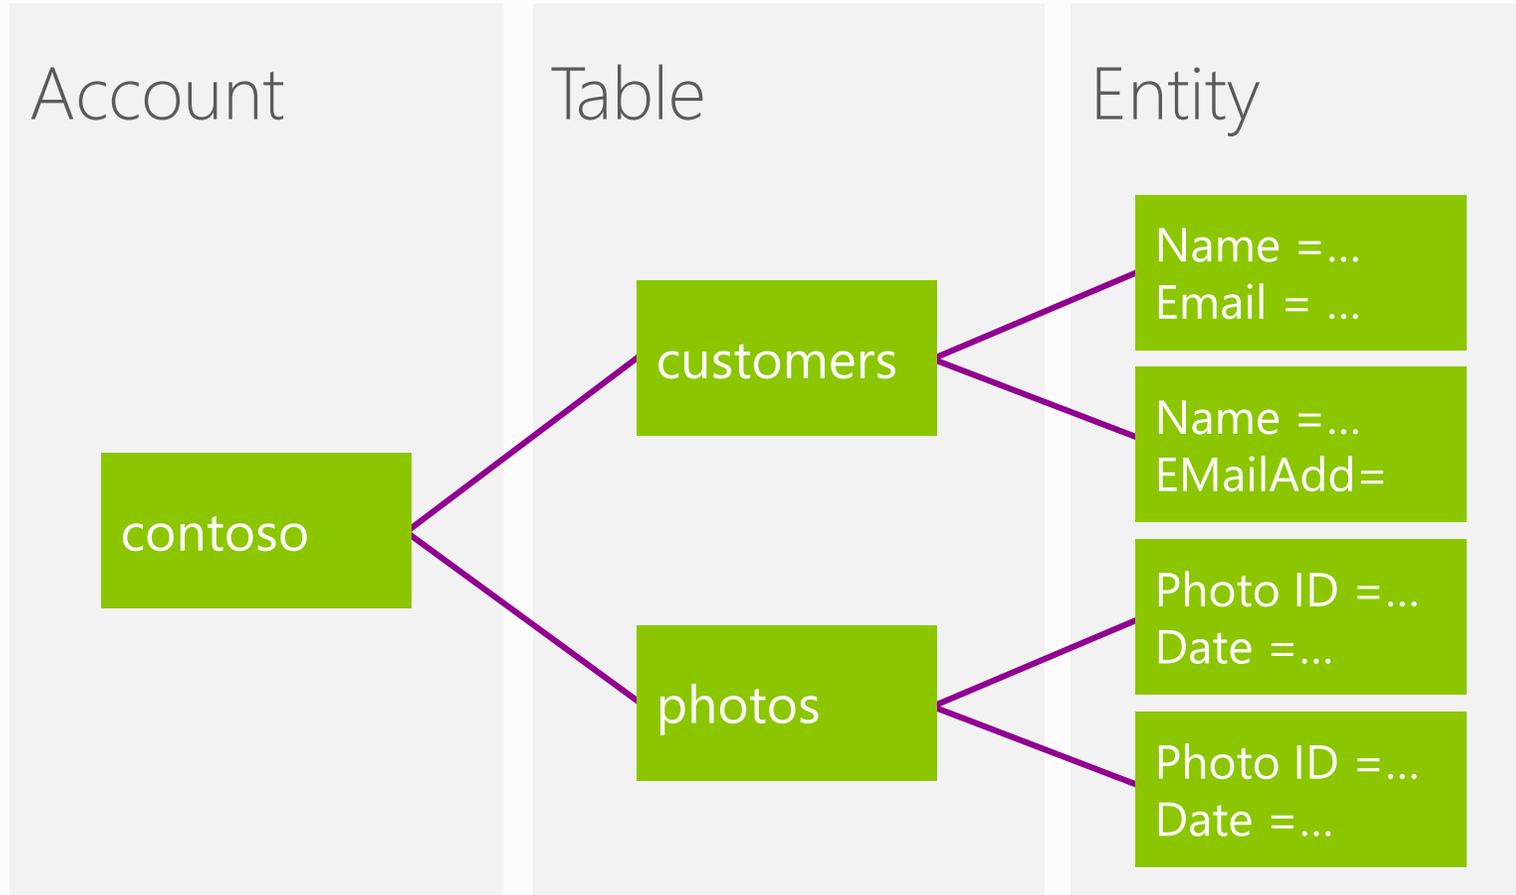

TheBlob.wmv

Windows Azure Storage

Tables

Table Storage Concepts

Entity Properties

Entity can have up to 255 properties

Up to 1MB per entity

Mandatory Properties for every entity

PartitionKey & RowKey (only indexed properties)

Uniquely identifies an entity

Defines the sort order

Timestamp

Optimistic Concurrency

Exposed as an HTTP Etag

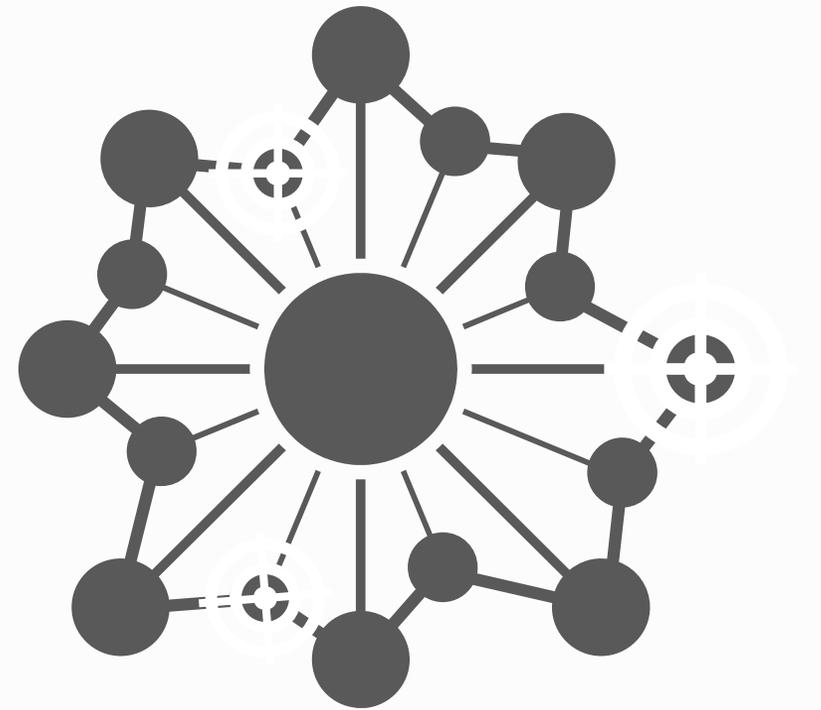

No fixed schema for other properties

Each property is stored as a <name, typed value> pair

No schema stored for a table

Properties can be the standard .NET types

String, binary, bool, DateTime, GUID, int, int64, and double

No Fixed Schema

FIRST	LAST	BIRTHDATE	FAV SPORT
Andy	Cross	2/2/1981	
Richard	Conway	8/11/1974	Kickboxing
Isaac	Abraham	5/8/1977	

Querying

```
?$filter=Last eq 'Cross'
```

	FIRST	LAST	BIRTHDATE
	Andy	Cross	2/2/1981
	Richard	Conway	8/11/1974
	Isaac	Abraham	5/8/1977
