

Lecture 1 – Introduction, Variables, Expressions, Statements https://cw.fel.cvut.cz/wiki/courses/be5b33prg/start

Michal Reinštein

Czech Technical University in Prague, Faculty of Electrical Engineering, Dept. of Cybernetics, Center for Machine Perception <u>http://cmp.felk.cvut.cz/~reinsmic/</u> reinstein.michal@fel.cvut.cz

INTRODUCTION

2

LECTURES – Michal Reinstein

- reinstein.michal@fel.cvut.cz
- <u>http://cmp.felk.cvut.cz/~reinsmic</u>

LABS – Tomas Petricek

- petrito1@fel.cvut.cz
- <u>http://cmp.felk.cvut.cz/~petrito1</u>

- Develop skills with Python fundamentals
- Learn to recognize and write "good" Python
- Gain experience with practical Python tasks
- Understand when to choose Python (or not!)

- Think like a computer scientist
- Combines:
 - mathematics (formal language),
 - engineering (analysis, synthesis, systems),
 - science (observe, hypothesis, predictions)
- Problem solving!
 - Formulate problems
 - Think about solutions
 - Implement solutions clearly and accurately

- Problem formulation (input / output)
- Formalism (math?)
- Algorithm (the idea!)
- Implementation (engineering)
- Testing (are we good?)

Problem formulation

Find a pair of numbers from a given list of N integers (sorted and unsorted) such that their sum is exactly as given (in our case 8).

Examples

[1, 2, 3, 9] where SUM = 8 ... negative case [1, 2, 4, 4] where SUM = 8 ... positive case

source: https://www.youtube.com/watch?v=XKu_SEDAykw

- Handy for engineers (rapid prototyping)
- Easy for beginners (steep learning curve)
- But strong for big apps: big data, Al ... (https://www.tensorflow.org , https://www.scipy.org , http://scikitlearn.org/stable /, http://playground.arduino.cc/Interfacing/Python , ...)
- Often used to command other programs (https://www.blender.org/manual/editors/python_console.html)
- Available for many platforms/operating systems (large community)

WHY PYTHON?

8

Stack Overflow <u>https://stackoverflow.com/</u> a good friend of yours!

source: https://stackoverflow.blog/2017/09/06/incredible-growth-python/

PYTHON

michalreinstein@MacBook-Pro:~\$~ \$ python3 Python 3.6.2 (default, Sep 21 2017, 00:54:38) [GCC 4.2.1 Compatible Apple LLVM 8.1.0 (clang-802.0.42)] on darwin Type "help", "copyright", "credits" or "license" for more information. >>> import this The Zen of Python, by Tim Peters Beautiful is better than ugly. Explicit is better than implicit. Simple is better than complex. Complex is better than complicated. Flat is better than nested. Sparse is better than dense. Readability counts. Special cases aren't special enough to break the rules. Although practicality beats purity. Errors should never pass silently. Unless explicitly silenced. In the face of ambiguity, refuse the temptation to guess. There should be one-- and preferably only one --obvious way to do it. Although that way may not be obvious at first unless you're Dutch. Now is better than never. Although never is often better than *right* now. If the implementation is hard to explain, it's a bad idea. If the implementation is easy to explain, it may be a good idea. Namespaces are one honking great idea -- let's do more of those! >>>

We will come back to the Zen of Python later ...

Michal Reinštein, Czech Technical University in Prague

9

m

Þ

- **Program** is a sequence of instructions that specifies how to perform a computation.
- Input get data from the keyboard, a file, device ..
- Output display data on the screen or send data to a file or other device (client/server, local/remote).
- Math perform mathematical operations (algorithms)
- Conditional execution Check for certain conditions and execute the appropriate sequence of statements.
- **Repetition** Perform some action repeatedly

WHAT IS PYTHON?

13

original slide by Tomas Svoboda, BE5B33PRG 2016/2017

EXAMPLE – COINS SEGMENTATION

💇 m p

14

IPYTHON – running python interpreter from web browser

http://scikit-image.org/docs/dev/auto_examples/xx_applications/plot_coins_segmentation.html

Syntax errors

- Formal tokens & structure of the code must obey rules (IDE)
- Python executes only syntactically correct code

Runtime errors

- Discovered during runtime (program fails!)
- Exceptions something exceptional happens (we can catch and handle exceptions!)

Semantic errors

- The meaning of the program (semantics) is wrong
- Program runs but does something different than we want

original slide by Tomas Svoboda, BE5B33PRG 2016/2017

And now is the right time to actually explore the interpreter ...

original slide by Tomas Svoboda, BE5B33PRG 2016/2017

DATA TYPES

17

>>> type("Hello, World!") >>> type(3.2) <class 'str'> >>> type(17) <class 'int'>

<class 'float'>

```
>>> type("17")
<class 'str'>
>>> type("3.2")
<class 'str'>
```

Strings in Python can be enclosed in either single quotes (') or double quotes ("), or three of each ("' or """)

```
>>> type('This is a string.')
<class 'str'>
>>> type("And so is this.")
<class 'str'>
>>> type("""and this.""")
<class 'str'>
>>> type(''' and even this...''')
<class 'str'>
```

- Integers (int)
- Strings (str)
- Float (float)

1, 10, 124 "Hello, World!" 1.0, 9.999

source http://openbookproject.net/thinkcs/python/english3e/variables_expressions_statements.html

The assignment statement gives a value to a variable:

```
>>> message = "What's up, Doc?"
>>> n = 17
>>> pi = 3.14159
>>> message
'What's up, Doc?'
>>> n
17
>>> pi
3.14159
```

```
>>> day = "Thursday"
>>> day
'Thursday'
>>> day = "Friday"
>>> day
'Friday'
>>> day = 21
>>> day
21
```

- We use variables to remember things!
- Do not confuse = and == !

= is **assignment** token such that *name_of_variable* = *value*

== is operator to test equality

- Key property of a variable that we can change its value
- Naming convention: with freedom comes responsibility!
- Illegal name causes a syntax error

source http://openbookproject.net/thinkcs/python/english3e/variables_expressions_statements.html

D

m

VARIABLES

- We use variables to remember things!
- Do not confuse = and == !
 - = is assignment token such that name_of_variable = value
 == is operator to test equality
- Key property of a variable that we can change its value
- Naming convention: with freedom comes responsibility!
- Illegal name causes a syntax error

KEYWORDS

20

| and | as | assert | break | class | continue |
|---------|-------|--------|----------|--------|----------|
| def | del | elif | else | except | exec |
| finally | for | from | global | if | import |
| in | is | lambda | nonlocal | not | or |
| pass | raise | return | try | while | with |
| yield | True | False | None | | |

- Python keywords have special purpose
- Always choose names meaningful to human readers
- Use **comments** to improve readability and clarity

- Big & complex programs == difficult to read
- Comments and blank lines are for human readers only, ignored by the interpreter
- Use this token # to start a comment
- Use blank lines to make the code visually more appealing

STATEMENTS

- Statement is an instruction executable in Python
- Statements do not produce any results
- So far only assignment statements =
- Statement examples: for, in, if ...

EXPRESSIONS

23

- Expression is a combination of values, variables, operators, and calls to functions
- Built-in Python functions: *len, type, print*
- Value by itself is an expression
- Expression produces result (right side of an assignment)

COURSE ADMINISTRATION

24

| date | week | lect. | topic | | | |
|------------|------|-------|--|--|--|--|
| 06.10.2017 | 1. | MR | Introduction, the way of program. Variables, expressions, and statements. 💏 lec01-intro.pdf | | | |
| 13.10.2017 | 2. | MR | Program flow, conditionals, simple loops, simple data types, 💏 lec02-programflow.pdf | | | |
| 20.10.2017 | 3. | MR | Program structure, functions, 📆 lec03-functions.pdf | | | |
| 27.10.2017 | 4. | MR | More complex data types, traversals, 📆 lec04-compound-types.pdf | | | |
| 03.11.2017 | 5. | MR | Iterations, loops. 📆 lec05-iteration.pdf (examples in PDF are for self-study). 📆 puzzle05.pdf | | | |
| 10.11.2017 | 6. | MR | Modules. Testing programs. 📆 lec06-modules.pdf, 📆 lec06-testing.pdf, Bonus task: Balls | | | |
| 17.11.2017 | 7. | | No lecture, O Public Holiday | | | |
| 24.11.2017 | 8. | MR | 🔂 Clean code, how to write it | | | |
| 01.12.2017 | 9. | MR | 📆 I/O reading, writing data. Intro to SPAM filter (ᇌ Handouts). | | | |
| 08.12.2017 | 10. | MR | Data collections: set, dict, , 🔂 lec09-othercollections.pdf | | | |
| 15.12.2017 | 11. | MR | Data collections II namedtuple. Objects, classes I, 🔂 lec10-classes-and-objects.pdf | | | |
| 22.12.2017 | 12. | MR | Objects, classes II, 📆 lec11-classes-and-objects-ii.pdf | | | |
| 05.01.2018 | 13. | MR | Handling exceptions, making code more robust. 🖈 lec12-classes-and-objects-ii.pdf. Questions and answers 📆 lec13-questions-problems.pdf, 🔹 score card and my_time codes | | | |
| 12.01.2017 | 14. | MR | Selected chapters from advanced programming. Questions and aswers. | | | |

- Lectures & computer labs
- Home works 50%
- Programming tests during the term 20%
- Final exam programming 30%
- Extra points: activity, finding bugs, errors ... 10%
- Automatic evaluation & plagiarism detection
