

Homework (B0B17MTB)

Problem Set 1

October 7, 2019

1 Assignment

For all the following problems, consider $N = 10$. However, in general, it can be any positive integer.

Problem 1-A Create a matrix

$$\mathbf{A} = \begin{bmatrix} 0 & 1 & 1 & 1 & 0/N \\ 0 & 1 & 1 & 2 & 1/N \\ 0 & 1 & 1 & 3 & 2/N \\ \vdots & \vdots & \vdots & \vdots & \vdots \\ 0 & 1 & 1 & N & N/N \end{bmatrix} \quad (1)$$

without any `for/while` cycle. Do not enter the numbers element-wise, use rather MATLAB functions. **(1 point)**

Problem 1-B Calculate norm of vectors arranged one below each other in a matrix $\mathbf{B} \in \mathbb{R}^{N \times 3}$ and normalize them to unitary size. Do not use `for/while` cycle. To solve the problem and to verify the solution, use the following matrix

```
B = reshape((1:3*N), 3, []).'
```

(1 point)

Problem 1-C Find all elements in matrix \mathbf{C} , defined as

```
C = gallery('circul', N)
```

larger than or equal to $x_{\min} = N/2$, return them in a vector \mathbf{u} and replace these values in the original matrix \mathbf{C} by new values $\hat{x} = 2x$. Do not use `for/while` cycle or `if/else` statement. **(2 points)**

Problem 1-D Create a matrix \mathbf{D} , defined as

$$D_{ij} = 2N + 1 - (i + j), \quad (2)$$

where N denotes the size of the matrix \mathbf{D} , i denotes the row index, and j denotes the column index. Do not use `for/while` cycle. Try to find as simple solution as possible. **(1 point)**

2 Instructions

Complete all the assignments till

- October 14th, 23:59 (Monday's group),
- October 16th, 23:59 (Wednesday's group).

Upload the solution as an m-file via the [BRUTE system](#). Together with that, fill your solutions into m-files called `Problem1_{A-D}` in the Homework checker and start validation via `homework1.p`. You can start validator as many times as you want. Once all the solutions are valid or you are satisfied with your result, choose option ("6: GENERATE SUBMISSION CODE"), and attach the generated file `HW1token.txt` to the BRUTE system as well.

All the problems shall be solved by the students individually (notice the BRUTE system has a duplicity checker).
